3D BodyScanner

Producing high speed body scans with 3D Beast 144 body scanner is merely a child's play. The built-in, high-end lighting and camera system in 3D Beast 144 makes it real for you: a smooth interplay of ScanBlue Software and Hardware creates a fully automated process chain of your shootings.

A total of 144 cameras are triggered simultaneously, transferring shot pictures directly into a PC to be processed later on by the 3D software. The 3D Beast 144 body scanner is permanently installed. The 3D Beast 96 is designed for mobile use.

The data deployment is made in your pre-set output formats by 3D Mobile, where it may be additionally augmented and synchronized per interface with your systems.

Features 3D Beast 144

- 144 built-in cameras
- permanent installation
- high speed body scans
- precision accuracy 0,002%
- processor - controlled precision scan system

Features 3D Beast 96

- 96 built-in cameras
- mobile system
- high speed body scans
- precision accuracy 0,002%
- processor-controlled precision scan system

Features 360° Beat 24+

- 24-48 build-in cameras
- Mobile System
- High speed 360° captures
- Processor-driven precision scan system
- Industry Ai Software supported

All specifications are version dependant.

Scanblue ist Vorreiter und Technologieführer im Bereich Virtual Reality, Augmented Reality und 3D. Bei uns erhalten Sie alles, was Sie brauchen, um Ihre Produkte in die dritte Dimension zu bringen: sei es in Online-Shops, auf Websites, bei ebay, mit Augmented Reality-Apps oder für 3D-Brillen.
