SCANBLUE.COM

3D FastContentter

3D Fast Content Creator - Industry 4.0 Product-sensing and self-regulating 3D and 360° Scan System Solution.

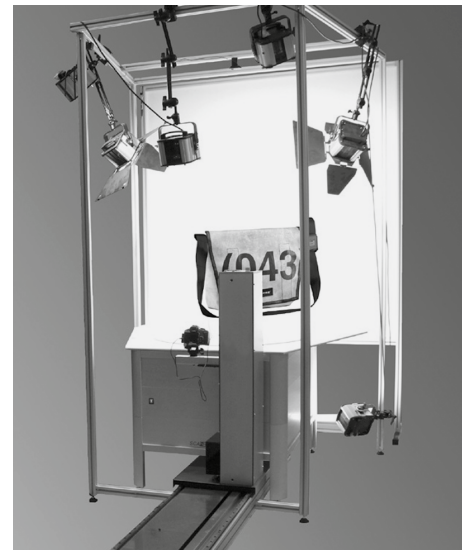

Simply the secret weapon for efficient content creation. Based on the automated acquisition of the object's extent the object itself is centered on the scanner while the camera is automatically adjusted in position and focus. The system can be further automated by product- or workflows-specific profiles.

- High throughput with hundreds or thousands of objects per day.
- Automatically embed product attributes and metadata.
- Automatically roll out scans and data to diverse departments and locations.
- Profiles ensure perpetual repeat accuracy of any scan.
- Automatically save, deliver and put online various formats and data based on profiles.
- Scan multiple products of various sizes independently and automatically.

- Automatically acquire accurate measurements of your products.
- Automatically capture high resolution stills from definable camera positions.
- Advanced profile management allows to precisely bring similar products into reproducible positions.

Additional tailored modules are available or built to order to further automate and speed up the object acquisition or to adapt to client-specific workflows.

The hardware and software meets every aspect of Best Practice for acquiring any object. The system can automatically execute the scan, send according messages, deliver the data and start over with a new object on the scanner. 24 hours a day, seven days a week, year by year. Five years warranty under maintenance contract.

Scanblue is the pioneer and technology leader in the industry Virtual Reality, Augmented Reality and 3D. With us, you get everything you need to bring your products to the third dimension: be it in online shops, on websites, at ebay, Amazon, Alibaba and all others, with Augmented Reality apps or for 3D glasses.
